

Insane 43" Generation II Catamaran Set Up Instructions

Placement of Motor:

The motor from the spark plug to the back of the transom is 14 inches.

Motor Mount:

I have custom drop mount quick release motor mounts available (\$55). This works best for the drop down section in the hull because it allows you to lower the center of gravity.

Hardware:

- Insane custom hardware kit includes rudder, standoff, strut w/skagg and all mounting hardware (\$125). This is what is recommended.
- The boat runs better if you use a strut w/a skagg. If you use your own hardware, you need to install the strut up against the transom.
- The rudder stand off should be 3 ½ inches from the transom to the leading edge of the rudder blade.
- The rudder blade needs to be mounted on the right side of the strut. The center of the rudder blade should be on the stringer.
- When setting the strut, the starting point would be 3/16th's of an inch off the bottom of the sponsons.

Gas Tank:

Placement of gas tank is in front of the engine. A 14 ounce tank is recommended.

Props:

65/16 3 blade with 375 for J&G or Quickdraw

65/18 3 blade with 420

67/17 3 blade 415-10-C
